Note: the GNU Fortran compiler uses the Fortran 77 standard by default, so the input file must have the .f90 (or of later standard) suffix, so that the compiler can guess the desired standard automatically. Alternatively you can supply the -ffree-form option with the usual .f suffix to enable free-form format instead of the fixed-form format used by the Fortran 77 standard.

In compiler construction, name mangling (also called name decoration) is a technique used to solve various problems caused by the need to resolve unique names for programming entities in many modern programming languages.. It provides a way of encoding additional information in the name of a function, structure, class or another datatype in order to pass more semantic information from the ...

The pathname of the directory into which the sources are unpacked should not contain spaces, as most make programs (and specifically GNU make) do not expect spaces.. If you want the build to be usable by a group of users, set umask before unpacking so that the files will be readable by the target group (e.g., umask 022 to be usable by all users). Keep this setting of umask whilst building and ...
