## **how to calculate Overall Equipment Effectiveness (OEE)**

Overall equipment effectiveness (OEE) is a term coined by Seiichi Nakajima in the 1960s to evaluate how effectively a manufacturing operation is utilized. It is based on the Harrington Emerson way of thinking regarding labor efficiency. [citation needed] The results are stated in a generic form which allows comparison between manufacturing units in differing industries.

## **Overall equipment effectiveness - Wikipedia**

OEE Formula . Your OEE calculation is based on a composite of the six big losses of your equipment broken down into three main areas; Availability, performance and quality.

## **OEE Calculation | Lean Manufacturing Tools**

1. Obtain Minimum 90% OEE (Overall Equipment Effectiveness) 2. Run the machines even during lunch. (Lunch is for operators and not for machines!)

Avoid errors. Any problems must be addressed quickly, because only immediate measures prevent further losses. Visualization in the workplace is an important contribution to performance improvement and lean culture.

## Machine Eye - Visualization in the production plant

Der Begriff Gesamtanlageneffektivität (GAE) oder englisch Overall Equipment Effectiveness (OEE) bezeichnet eine vom Japan Institute of Plant Maintenance erstellte Kennzahl. Sie ist eines der Ergebnisse im Zuge der jahrzehntelangen Entwicklung des TPM-Konzeptes (TPM: Total Productive Maintenance). Die Gesamtanlageneffektivität ist ein Maß für die Wertschöpfung einer Anlage.

## Gesamtanlageneffektivität â€“ Wikipedia

Benefits. In the short term, Short Interval Control is an effective tool for improving OEE with minimal capital investment. It does require an investment in training. In the long term, Short Interval Control helps to create a culture of continuous improvement, where operators are actively engaged in suggesting and implementing improvements on an ongoing basis.

Jyoti "Reducing the resources necessary to produce value is the ultimate goal of kaizen. The takt time / cycle time calculation tells you what you MUST have to do the job as it is currently done. If you don't like what the math tells you, then set a target objective (what cycle time do you NEED?) then apply kaizen / problem solving to hit that target.
