Tuned Radio Frequency (TRF) Receivers The tuned radio frequency (TRF) radio receiver uses an L-C resonant circuit in the front-end, followed by one or more radio frequency amplifiers followed by a detector stage. Two varieties are shown in Figures 8.2 and 8.3. The version in Figure 8.2 is called a tuned gain-block receiver.

Practical Radio-Frequency Handbook input, not 6 dB, i.e. you no longer have a 4:1 impedance ratio transformer. So it pays to try and keep the electrical length of the winding at the highest required frequency to a tenth of a wavelength or less; in this case the characteristic impedance of the line used is not too critical.
