Speed is the distance traveled divided by the time of travel. For example; if you were to travel a distance of 10 miles in 2 hours time, then your average speed equals 5 miles per hour. $s=d/t$ (s =speed, d =distance, t =time, and the / means to divide). The word velocity is very similar to speed (except velocity also has a direction called a vector) and in most cases we will now use the letter "v ...

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.

Physics (from the Ancient Greek $\varphi\upsilon\sigma\iota\varsigma$, physis meaning "nature") is the fundamental branch of science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

In ethics, value denotes the degree of importance of some thing or action, with the aim of determining what actions are best to do or what way is best to live (normative ethics), or to describe the significance of different actions. Value systems are proscriptive and prescriptive beliefs, they affect ethical behavior of a person or are the basis of their intentional activities.

Rutgers Physics News The 2018 Clarivate Analytics (formerly Thomson Reuters) list of highly-cited researchers was just released and we are delighted that, once again, two of our colleagues, Sang-Wook Cheong and Saurabh Jha, are included among this group. This distinction places them among the top 1% most cited for their subject field and year of publication, earning them the mark of exceptional ...

Four on-lattice and six off-lattice models for active matter are studied numerically, showing that in contact with a wall, they display universal wetting transitions between three distinctive phases.

Above: Example of a "ring" of scorched ground from a UFO landing trace case at Delphos Kansas USA, 1971 (photo 3.5 years after the event). Over 3000 such cases of damage to the soil and plants where a UFO landed have been recorded by 2006 in 70 countries by Ted Philips of Center for Physical Trace Research.

1. Introduction. Holism has often been taken as the thesis that the whole is more than the sum of its parts. Several different interpretations of this epigram prove relevant to physics, as we shall see.
