

**solution electromagnetic theory vanderlinde pdf**

An object with an electric dipole moment is subject to a torque  $\vec{\tau}$ , when placed in an external electric field. The torque tends to align the dipole with the field. A dipole aligned parallel to an electric field has lower potential energy than a dipole making some angle with it. For a spatially uniform electric field  $E$ , the torque is given by:  $\vec{\tau} = \vec{p} \times \vec{E}$ , where  $p$  is the dipole moment, and the symbol ...
